

Geography video club

Every Wednesday 1.35pm -
2.05pm

In video club we will be watching a wide variety of programs covering many different aspects of Geography.

We will witness the devastating effect of natural disasters on countries around the world, explore places both far away and quite close to home, meet the people who live there, and investigate the issues found in the world today.

Expect much discussion as we broaden our horizons and learn about what is happening around our planet.

See the board outside room ST9 for
details on what you can watch this week.
